/DATA CLEANING

Keep and rename useful columns

Transfer datatype and clean NULLs

/SQL & JOIN

Connect to SQL Database + JOIN on Airport Tables

Read in python

/CLEANING

Data cleaning again

/GET DAILY STATION DATA

Api: Meteostat (RapidAPI)

Columns: weather_station_id and further weather statistics, e.g. The maximum snow depth in mm

/DATA **CLEANING**

Replace weather_station_id with airplane_name (for merging) Keep useful columns Transfer datatype

/CREATING **DATAFRAME**

Weather table is ready

HOW:

Left Join

CONDITIONS:

origin_name
(Flights DB) =
 airport_name
 (Weather DB)
 AND
 Flight_date
(Flights DB) =
 weather_date
 (Weather DB)

MERGE:

Flights Table & Weather Table

DATA CLEANING

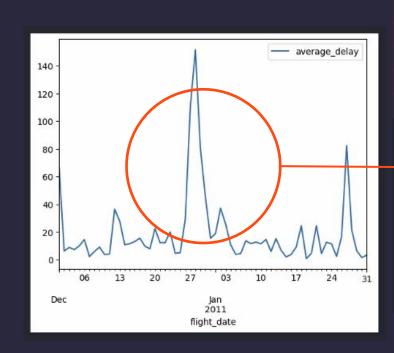

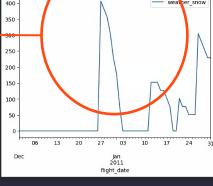

/ HYPOTHESIS (1)

"Is there a discernible correlation between the duration of a snowstorm and the average delay of departure?"

— HYP / GROUP 1

Mon	Tue	Wed	Thu	Fri	Sat	Sun
		1	2	3	4	5
6	7	8	9	10	11	12
13	14	15	16	17	18	19
20	21	22	23	24	25	26
27	28	29	30	31		
-						
400 -			1	ŀ	— weal	er_snow
350 -					'	\
500	4					
250 -	1					
0000000	- \					1 4
200 -	\		1			

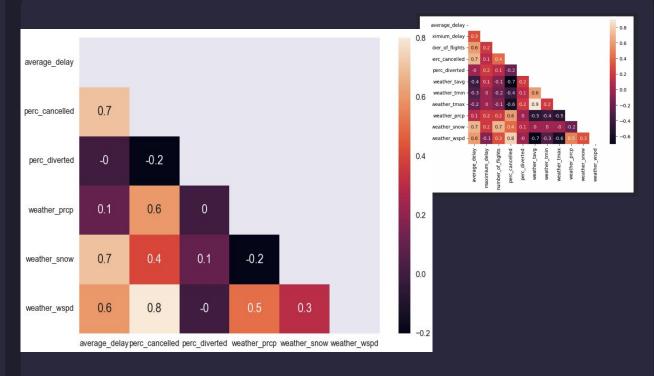

/ HYPOTHESIS (2)

"Among rain, snowfall, and wind strength, which meteorological factor has the strongest correlation with delayed departure time?"

— HYP / GROUP 2

"Focus on success, not distractions."

/ WINDSPEED vs. AVERAGE DELAY

/ CONCLUSION

Correlation does not imply causation!

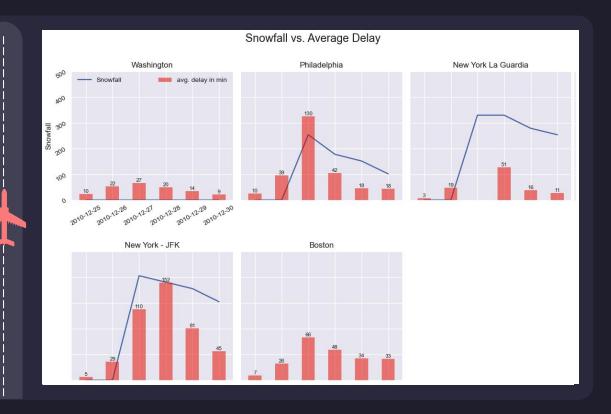

/ SNOWFALL vs. AVERAGE DELAY

/CONCLUSION

Snowfall is correlated and causally related

/ SNOWFALL vs. CANCELLED

/CONCLUSION

Snowfall is correlated and causally related

/READY TO TAKE OFF?

/DO YOU HAVE ANY QUESTIONS?

/DO YOU HAVE ANY COMMENTS?

/DO YOU HAVE ANY SUGGESTIONS?

/WANT TO SEE OUR NOTEBOOK?

> /NEXT STEPS: EXPAND TIMEFRAME TO 2009 AND COMPARE TO 2010
